

Find the Fossils

For anyone who loves fossils!

Did you know that there are fossils all over the outside of the Legislative Building? The Tyndall Stone that the building is made of is filled with ocean fossils from the Ordovician Period!

Take a walk around the building, and see if you can find fossils that look like the photographs below! When you find one, draw it, or take a rubbing of it using a pencil or crayon. Then, write down what kind of creature or plant you think the fossil was! You can check your answers on our website.

If you find a fossil that doesn't look like any of our photos, take a picture, draw it, or take a rubbing, and then tell us about it! We will work to find out what kind of fossil it is.

Good luck and happy hunting!
